GT4 Component Fact Sheet

Pre-WS Authentication & Authorization

Last updated: 19 July 2004

General Component Description

This component contains libraries and tools supporting authentication and authorization for GT Pre-WS components. This includes support for various authorization modes, such as host, self, identity, gridmap and custom, as well as a SSL-based GSS-API implementation for authentication and delegation of rights.

What's New in GT4?

No new features. Improved test coverage and friendlier error messages.

Backward Compatibility Statement

Full backward compatibility with the Pre-WS Authentication and Authorization code distributed with 3.2, 3.0 and 2.4.

Technology Dependencies

This component depends upon the GT Pre-WS Core and Common packages as well as OpenSSL and Cyrus SASL.
